

Mack Municipal and Government Trucks

There are trucks, and then there are MACK trucks. So what's the difference? MACK trucks are a product of over a century of knowledge about what works and what doesn't. Our vehicles served in two world wars, built a modern America and became true legends. It's just one of the things that make us an entirely different breed of truck.

Our popular and rugged Granite truck is an ideal vehicle for cleaning up after Mother Nature. Drivers will love the ability of looking over the hood and being able to see the front of their snowplow, along with the option of heated windshield for clear visibility in all conditions. Also, the Road Watch temperature gauge reads the road surface temperature, making it easier than ever to spread the right amount of chemicals for the conditions. Add to that our legendary reliability and durability, and you have a machine that gets the job done every time.

Mack components, like step brackets, air tanks and battery boxes are permanently positioned forward of the rear of the cab. This ensures body compatibility while eliminating costly component relocation. Attaching body to truck is now easier than ever with our Body Link connectors, conveniently located under the hood and dash panel. Body Link eliminates wire cutting and splicing, just plug and go.

For application that are especially grueling, the Granite can be spec'd with a factory installed all-wheel drive chassis with ratings ranging from 14,000 lbs to 23,000 lbs.
